PYHTON PRACTICAL

EX1. ***PROGRAMME DISPLAYING HELLO WORLD:***

```
print("hello world")

print("\n i am learning pyhton programming")
```

EX2***. PROGRAMME ON SUM:***

```
a=int(input("enter a:"))

b=int(input("enter b:"))

sum=int(a)+int(b)

print("the sum is :",sum)
```

EX3. ***PROGRAMME ON IF AND ELSE:***

```
num=int(input("enter the number:"))

if num  >= 10:

 if num  <=20:

  print("this is between 10 and 20")

 else:

    print("this is over 20")

else:

    print("this is under 10")
```

EX4. ***PROGRAMME FINDING THE SALARY AND DA :***

```
a=int(input("enter identity number:"))

b=input("enter employee name:")

c=float(input("enter basic salary:"))

da=float(c*.40)
```

```
print("the identity number:",a)
print("\n the employee name:",b)
print("\n the basic salary:",c)
print("\n the dearness allowance:",da)
```

EX5. ***PROGRAMME ON INFINITE LOOP:***

```
num=1
while True:
    num=num+1
    print(num)
```

EX6. ***PROGRAMME ON IF AND ELSE IF:***

```
num1=int(input("enter the number"))
if num1>10:
    print("this is over 10")
elif num1 ==10:
    print("this is equal to 10")
else:
    print("this is under 10")
```

EX7. ***PROGRAMME FINDING OUT PRESENT TIME:***

```
from datetime import datetime
now_method = datetime.now()
currentTime = now_method.strftime("%H:%M:%S")
print("current time=",currentTime)
```

EX8. ***PROGAMME GIVING TOTAL AND AVERAGE MARKS OF 5 SUBJECTS:***

```
name=input("enter your name:")
eng=int(input("enter eng marks:"))
maths=int(input("enter maths marks:"))
science=int(input("enter science marks:"))
hindi=int(input("enter hindi marks:"))
history=int(input("enter history marks:"))
total=int(eng+maths+science+hindi+history);
print("\n the total marks is:",total)
avg=float(total/5);
print("\n the average marks is :",avg)
```

EX9. ***PROGRAMME BASED ON FOR LOOP:***

```
a=int(input("enter any number:"))
for i in range(10):
    print("the number",a)
```

EX10. ***PROGRAMME BASED ON NESTED IF AND ELSE :***

```
age=int(input("what is your age?    : "))
if age >= 18:
    print("you can vote")
elif age == 17:
    print("you can learn to drive")
elif age == 16:
    print("you can buy a lottery ticket")
else:
    print("you can go trick or treating")
```

EX11. ***PROGRAMME USING FOR LOOP:***

```
name=input("enter your name:")
for i in name:
   print(i)
```

EX12.***PROGRAMME USING IF ELSE AND FOR LOOP:***

```
num=int(input("how many friends do you want to invite to the party?__:"))
if num<10:
   for i in range(0,num):
      name=input("Enter a name:")
      print(name,"has been invited")
else:
   print("too many people")
```

EX13.***PROGRAMME ON VOWELS:***

```
ch=input("enter any character:")
if (ch=='A' or ch=='a'):
   print(ch   ,"is a vowel")
elif (ch=='E' or ch=='e'):
   print(ch   ,"is a vowel")
elif (ch=='I' or ch=='i'):
   print(ch   ,"is a vowel")
elif (ch=='O' or ch=='o'):
   print(ch   ,"is a vowel")
elif (ch=='U' or ch=='u'):
   print(ch   ,"is a vowel")
else:
  print(ch   ,"is not a vowel")
```

EX14.***PROGRAMME ON ADDITION,MULTIPLICATION,SUBTRACTION AND ADDITION:***

```
x=50
y=20
a=int(x+y)
print("the result is:",a)
b=int(x-y)
print("the result is:",b)
c=int(x*y)
print("the result is :",c)
d=float(x/y)
print("the result is :",d)
```

EX15.PROGRAM ON SIMPLE INTERSET:

```
a=int(input("Enter Principal:"))
b=int(input("Enter Rate:"))
c=int(input("Enter Year:"))
interest=float(a*b*c*.01)
print("the Interest is :",interest)
amount=float(a+interest)
print("\n\n the Amount is :",amount)
```

EX16.PROGRAM ON SWAPPING

```
n1=int(input("Enter Number 1:"))
n2=int(input("Enter Number 2:"))
print("Original Numbers:",n1,n2)
n1,n2=n2,n1
print("After Swapping:",n1,n2)
```

EX17.PROGRAM ON CUBE:

```
num=int(input("Enter a number:"))
cube=num*num*num
print("Number is",num)
print("Its cube is",cube)
```

EX18.PROGRAM ON SELLING PRICE &DISCOUNT:

```
price=float(input("Enter Price:"))
dp=float(input("Enter discount%:"))
discount=price*dp/100
sp=price-discount
print("Cost Price:",price)
print("Discount:",discount)
print("Selling Price:",sp)
```

EX19.PROGRAM ON DIVISIBILITY:

```
number1=int(input("Enter first Number:"))
number2=int(input("Enter second Number:"))
remainder=number1%number2
if remainder ==0:
    print(number1,"divisible by",number2)
else:
    print(number1,"is not divisible by",number2)
```

EX20.PROGRAM ON WHETHER THE GIVEN CHARACTER IS UPPERCASE,LOWERCASE OR SPECIAL CHARACTER:

```
ch=input("Enter a single character:")
if ch>='A' and ch<='Z':
```

```
    print("You Entered an Upper Case Character:")
elif ch>='a' and ch<='z':
    print("You Entered an Lower Case Character:")
elif ch>='0' and ch<='9':
    print("you entered a digit:")
else:
    print("You Entered a Special Character:")
```

EX21.PROGRAM ARRANGING THE INPUTS IN ASCENDING ORDER:

```
x=int(input("Enter first number:"))
y=int(input("Enter Second number:"))
z=int(input("Enter Third number:"))
min=mid=max=None

if x<y and x<z:
    if y<z:
        min,mid,max=x,y,z
    else:
        min,mid,max=x,y,z
elif y<x and y<z:
     if x<z:
         min,mid,max=y,z,x
else:
    if x<y:
        min,mid,max=z,x,y
    else:
        min,mid,max=z,y,x
```

```
    print("Numbers in Ascending Order:",min,mid,max)
```

EX22. PROGRAM ON FUNCTION

```
a=int(input("enter num1:"))
b=int(input("enter num2:"))
y=eval("a*b")
print(y)
```

EX23. PROGRAM ON LENGTH OF A STRING:

```
a=str(input("Enter a Name:"))
b=len(a)
print("the length of your name:",b)
```

EX24. PROGRAM ON IF AND ELSE LADDER:

```
no=2
week_day="";
if(no==1):
    week_day="Sunday"
elif(no==2):
    week_day="Monday"
elif(no==3):
    week_day="Tuesday"
elif(no==4):
    week_day="Wednesday"
elif(no==5):
    week_day="Thursday"
elif(no==6):
```

```
    week_day="Friday"
elif(no==7):
    week_day="Saturday"
print(week_day)
```

EX25. PROGRAM ON INPUT AND IF AND ELSE

```
no=int(input("enter a number:"))
if(no==1):
    print("sunday")
elif(no==2):
    print("monday")
elif(no==3):
    print("tuesday")
elif(no==4):
    print("wednesday")
elif(no==5):
    print("thursday")
elif(no==6):
    print("friday")
elif(no==7):
    print("saturday")
else:
    print("invalid number")
```

EX26. PROGRAM ON NESTED IF

```
num=float(input("Enter a Number:"))
if num>=0:
```

```
    if num==0:
        print("Zero")
    else:
        print("Positive Number")
else:
    print("Negative Number")
```

EX27. PROGRAM ON INFINITE LOOP

```
i=True
while (i):
    print("gaurav mali")
```

EX28. PROGRAM ON LENGTH OF A NAME

```
name = input("Enter your First name:")
length = len(name)
print(length)
```

EX29. PROGRAM ON UPPERCASE AND LOWER CASE

```
word = input("ENTER WORD:")
word = word.upper()
word1 =word.lower()
print(word)
print(word1)
```

EX30. PROGRAM ON REVERSE OF A STRING

```
a=input("enter name:")[::-1]
print(a)
```
